Content and Community

AI Transformation Requires Institutional Alignment

Every format is built on the same framework: the three realities every banking leader must hold at the same time.

"The open bootcamp trains a few participants. The in-house version trains your institution."

REALITY ONE

Technological Capability

What reasoning models, agents and multimodal AI can actually do today — and what is likely to change over the next twelve months. Grounded assessments, not vendor promises.

REALITY TWO

Competitive Dynamics

How AI-native firms and early movers are reshaping service, operations, distribution, credit and customer engagement.

REALITY THREE

Institutional Transformation

What it takes to move a regulated, risk-conscious institution through genuine AI transformation without destroying trust or the balance sheet.

WHO IT IS FOR

- Chairmen & Board Members
- CEOs & Executive Committees
- Strategy & Innovation Leaders
- Technology, Risk & Operations Leaders

Four Formats. One Programme.

60–90 MINUTES

Keynote Sessions/Executive Briefing

Achieves alignment, not skill-building. The board or leadership team leaves with a single, current, shared picture of what AI can and can't actually do today, how competitors and AI-native entrants are moving, and which decisions the institution can no longer defer. It's designed to set up the next strategic conversation — a board cycle, a planning session, an exec offsite — rather than to teach.

ONE DAY

Strategic Offsite Facilitation

Achieves decisions, not just discussion. Faculty structures the institution's own offsite around its actual strategic choices, using the bootcamp frameworks to pressure-test options rather than present generic content. Leadership leaves with sharper, debated, and stress-tested positions on the AI questions specific to their bank — clarity on trade-offs, not a training certificate.

INTENSIVE CAPABILITY BUILDING

One-Day Training

Achieves working capability across a team. This compresses the core bootcamp curriculum — agentic AI, technology architecture, organising for AI — into a single day, plus a hands-on lab with frontier AI tools. Participants leave able to speak intelligently about the technology and its institutional implications, and with direct, practical exposure rather than theory alone.

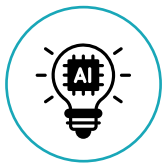

FULL PROGRAMME EXPERIENCE

Two-Day In-House Bootcamp

Achieves institutional readiness. This is the complete outcome set: a shared and current view of AI capability across the institution, better strategic decisions, hands-on exposure to frontier tools, and — uniquely to this format — a draft AI transition strategy for the institution itself, built and stress-tested with faculty and peers by the end of the programme. Participants also leave with a proceedings report and full programme materials, so the outcome persists beyond the room.

What Your Team Leaves With

01 Shared AI Understanding

A shared and current view of what AI can realistically do today across your institution.

02 Better Strategic Decisions

A shared and current view of what AI can realistically do today across your institution.

03 Practical Exposure

Hands-on awareness of frontier AI tools and leading use cases.

04 AI Transition Strategy

In the full formats, a draft AI transition strategy reviewed with faculty and peers.

THE FACULTY

Our faculty includes experienced operators, strategists and policy experts with deep experience in banking, financial services, technology and transformation.

Axel Winter

Former Global Head, Enterprise Architecture & Technology Strategy, Standard Chartered

Juergen Rahmel

Global AI & Digital Innovation Expert
Lecturer, University of Hong Kong

Tawonga Machusha

Board Member, Africa Fintech Network
Global AI Policy Leader

Emmanuel Daniel

Head Faculty, The Banking Academy
Founder, TAB Global

Every Bank Is At A Different Point. Your Programme Should Be Too.

Discuss your requirements with our team and receive a customised proposal tailored to your institution.

TAB Global has spent over two decades embedded inside the banking industry — not observing it from the outside. As the organisation behind The Asian Banker's research, events and executive community, TAB Global sits closer to how real banks actually make decisions than any generic AI training provider can. This programme isn't adapted from a general-purpose AI curriculum; it's built directly on Building the AI Bank: Speed, Judgement and Power, written by TAB Global founder Emmanuel Daniel, and delivered by faculty who have actually run technology and architecture functions inside global banks, advised regulators on AI policy, and worked the frontier of AI adoption in financial services. The result is a programme grounded in banking reality, not vendor pitch decks.
